

Sullair Water Chillers

Precision Chilled Water

Sullair Water Chillers

What are Water Chillers?

Water chillers are used for controlled cooling of products, mechanisms and machinery in a variety of industries.

They remove heat from the process water and transfer it to air via a heat exchanger. Using the refrigeration cycle, Sullair Water Chillers are able to cool the water to below ambient temperature.

Why Choose a Sullair Water Chiller?

Sullair has been providing precision chilled water technology in Australia for over 30 years. Able to meet the demands for variety of applications, Sullair Water Chillers satisfy even the most stringent requirements.

The Sullair Water Chiller range offers either axial or centrifugal fans upto 82kW in power. They can be customized for all industrial and environmental conditions to ensure the most accurate control of water temperature.

Applications

- Laser Technology
- Extruders
- Surface Processing
- Welding Engineering
- Blow Mould Machines
- Printing Systems
- Coating Systems
- Chemicals and Pharmaceuticals
- Plastics Processing
- Thermoforming Machines
- Plasma Coating
- Medical Imaging
- Food & Beverage
- Injection Moulding
- Cutting Machine Tools
- Electroplating Baths
- Bioenergy
- Compressed Air

Precision Chilled Water Everytime...

Sullair Water Chillers provide a continuous supply of water at constant temperatures, regardless of load or ambient temperature changes. This secures industrial processes, reduces cost and improves productivity.

Champion Water Chillers combine advanced design solutions, such as energy saving scroll compressors and a sophisticated microprocessor, with unique features to meet the specific needs of industrial users including extreme flexibility towards the varying working conditions typically found in industry.

Features & Benefits

User Friendly Design

A unique design makes Sullair Water Chillers easy to use, access, position and repair. This makes them highly versatile and saves on downtime.

Features include:

- Removable tank & condenser
- Full frontal access for easy maintenance
- Compact & lightweight construction
- Compatible with pressurized closed circuits

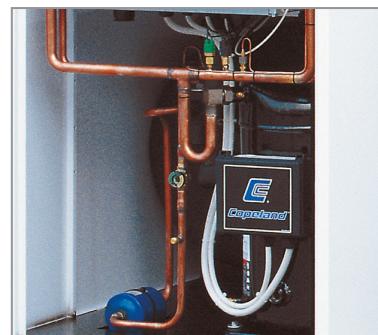

Maximum Efficiency

Maximum efficiency can be achieved through the energy saving components to reduce power consumption.

Features include:

- Compliant scroll compressor (ICEP007 & above)
- Economic design
- Multiple compressors (ICEC076 & above)
- R407C refrigerant

Precision Control

Advanced onboard control unit helps to control the water temperature.

Features include:

- Low water velocity
- Adjustable programming (ICEP015 & above)
- Oversized water tanks
- Unique water outlet temperature control design

Reliable Operation

Sullair Water Chillers offer an all-in-one package capable of operating continuously in all conditions of varying applications. They can accept water inlet temperatures up to 30°C and can deliver outlet temperatures down to 0°C, capable of achieving as much as 15°C difference in temperatures.

Features include:

- Twin independent refrigeration circuits
- Water fouling safeguards
- Condenser pre-filter (ICEP007 & above)
- Extensively tested for quality assurance

Champion Water Chillers maximize productivity and minimize costs, as well as easing conformity to regulations on water quality. Champion Water Chillers are the perfect solution to industrial chilled water needs.

Specifications

Sullair Water Chillers ICEP003 - ICEP024

Correction factors

- At water in/out temperature = 20/15 °C, glycol 0 %, either 25 °C ambient temperature (air-cooled models) or 25 °C condenser water inlet temperature with 35°C condensing temperature (water-cooled models).
- At water in/out temperature = 12/7 °C, glycol 0 %, 32 °C ambient temperature (air-cooled models).
- Referred to axial fan version in free field conditions at a distance of 10m from unit, measured on condenser side, 1m from ground.

A) Ambient temp. (air-cooled models) correction factor (f1)	°C	5	10	15	20	25	30	35	40	45	N/A
		1,05	1,05	1,05	1,05	1	0,95	0,89	0,83	0,77	N/A
B) Water outlet temperature correction factor (f2)	°C	5		10		15		20		25	N/A
		0,72		0,86		1		1		1	N/A
C) Glycol correction factor (f3)	%	0		10		20		30		40	50
		1		0,99		0,98		0,97		0,96	0,94
D) Condenser water inlet temp. (water-cooled models) correction factor (f4)	°C	20		25		30		35		40	N/A
		1,05		1		0,95		0,9		0,85	N/A

To obtain the required cooling capacity multiply the value at nominal conditions by the above correction factors (i.e. cooling capacity = $P \times f_1 \times f_2 \times f_3 \times f_4$, where P is the cooling capacity at conditions (1)). Sullair Water Chillers, in their standard configuration, can operate up to ambient temperatures of max 45 °C and min. 5 °C and water temperatures of max 30 °C inlet and min. 0 °C outlet. The above correction factors are approximative: for a precise selection or higher capacities, refer to Sullair's Sales Specialist.
